The electric model was set up to fly for 30 seconds, which gave 6 1/2 laps. Upon landing the electrical system was reset after waiting the desired time. Then the model was flown again. The models battery provided energy for (6) 30 second flights but was changed after 5 flights - Each pilot on the list flew 20 times except Harold Ellis (10) flights and Gene LaFaillo who flew 6 times. Batteries were kept freshly charged so the next pilot could be made ready with minimal down time. Fun Event.	5

With 171 flights, the WICHIHAWKS contributed more flights in one weekend than we have in all the years of our participation, combined! We had 7 pilots on Saturday, Sunday was sunny all day but stronger winds than predicted. We had 8 pilots on Sunday. Despite the weather and a big cookout on Sunday. Despite the put up a good number of flights. My suggestion is to not change a thing. The 5 lap rule and the addition of a make up weekend due to weather, etc are the only changes that uwer necessary while not reducing the "fun" factor.
